

Assignment 3: Android Application Programming (90 points; due Tuesday, June 16th at 11:59 PM)

You are almost done bringing the bank to the 21st century. Nice work! The last thing that needs to be done is to bring the bank a mobile app. They know that there is only so much that you can do, but they still would like a miracle. It should act like the JavaFX client that you've seen on Assignment #2, but just on an Android device. Use the Android Emulator and develop it on a simple phone app as a starting point. Make sure that you're using the most recent SDKs, specifically Android 7.0 and above. You should be using native Android to develop your code. For the login, for extra credit, I will set up a cloud based SQLite database to test the same login as for Assignment #2.
